

KDFM eXplorer

A reliable and high-performance fleet management solution to optimize your productivity, control your costs, facilitate integration with your ERP and retain your customers.

A Multi-Platform Data Collection Agent.

Unique in the MPS Industry!

Highlights:

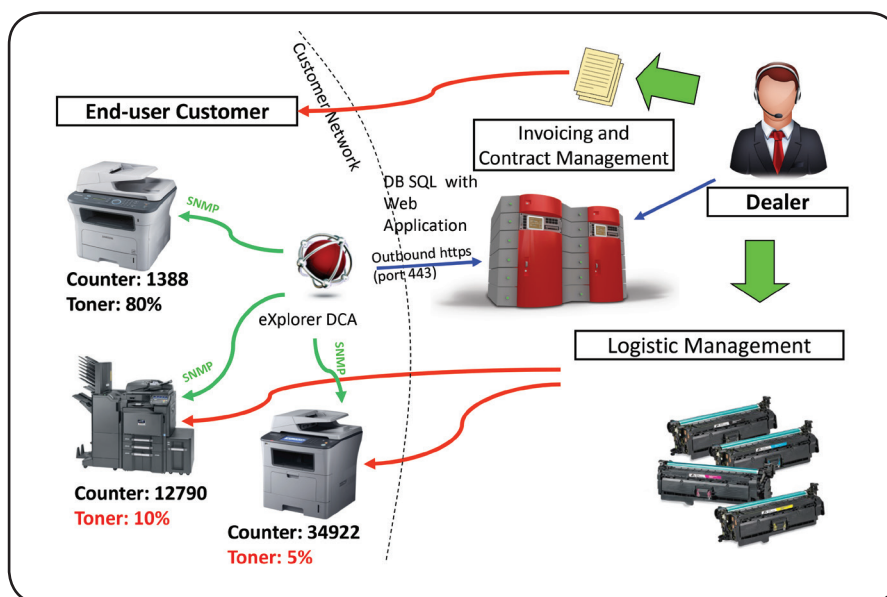

- Easy to implement and access on any internet-enabled device (PC, tablets, smartphones...)
- Free and automatic updates in real time
- Cloud-based platform with data hosted in a highly secure environment, server based in the EU and compliant with GDPR
- Independent from the OEMs
- Multi-brand management
- PrintReleaf Reforestation program

KDFM eXplorer is the most complete system for print fleet remote management available on the market. It allows viewing at any time of the device status, predicts and plans supplies replenishment automatically and integrates the meter readings into your ERP or any other database system to facilitate your customer's billing process.

Key features of KDFM eXplorer include:

- Printing system remote tracking, alert and delivery management
- Automated meter reading and data integration via API technology with external systems, like ERPs
- Data history available on print volumes, alerts, handling and use of consumables for each device
- Elimination of replacement stock stored at the customer's premises and toner waste by predicting the replenishment date
- Visibility to all the customer's fleet including the non-managed devices (within the limit of 40% of the managed devices)
- Non-stop device steadiness, including instances when the PC containing the DCA is switched-off, thanks to the embedded DCA eXplorer on the device* or multiple DCA installation (multiple workstations) at one single end-user site
- MAC OSX, RASPBERRY PI2/PI3 and Linux compatible
- Many reports and dashboards on the customizable portal
- Reduction of shipping costs with toner orders consolidation per device and site
- Free access to HP Smart Device Services (SDS)*, powered by MPS Monitor
- Integration of your supplies codes for consumables fulfillment orders

Architecture

How KDFM eXplorer differs from the other remote device management softwares?

With nearly 40 years of expertise in the imaging industry, Katun knows the daily concerns from our printing systems dealers: cost streamlining, productivity optimization and customer satisfaction. Therefore, Katun has enlisted a European leader in device management to meet those expectations:

► Data always active

The PC containing the DCA, switched off, a security update or the equipment being replaced are just a few of the possible causes for toner levels or maintenance alerts no longer triggering. With the multi-platform DCA eXplorer (redundancy technology), the data remains active and systematically updates into the portal.

► Facilitate the customer billing process

With data transfer via API, available with KDFM eXplorer easily allows, the data integration into your ERP or any other database system is easy. Data export available in most popular formats (excel, csv, xml, pdf, etc).

► Cost per page contracts management

KDFM eXplorer allows the dealers and service providers, that are not equipped with ERP, to manage maintenance contracts and have access to costs history per device.

► Share information with your customers

KDFM eXplorer allows dealers to provide a restricted access to their customers to customize the portal with a company logo), dashboards to track the print volumes, identify the sources of waste and to evaluate the equipment upgrade, promotes customer satisfaction.

► An affordable and accessible solution

KDFM eXplorer is a flexible solution: you can be charged per connected device/month, with no commitment in time or benefit from degressive rate based on a minimum monthly quantity of devices billed.

Try KDFM eXplorer for free for 30 days!

* Currently available on Samsung XOA/E, HyPAS (Kyocera, Utax, TA)
HP FutureSmart, Lexmark ESF (other OEMs coming soon)
** Included in the KDFM eXplorer management program
