

KDFM Monitor Advanced: A Flexible Device Management Program!

Your Benefits

- Save time in your billing process
- Reduce your inventory cost
- Plan supplies & maintenance ahead of time
- Increase customer satisfaction
- Free starting training and full support included
- Customized training sessions available in local language
- Zebra thermal devices monitoring capabilities
- Help preserving Environment with PrintReleaf™ reforestation program
- Direct Data Integration to ERPs with API
- Detect new sales opportunities

KDFM Monitor Advanced

Katun's device management solution, is designed to remotely collect meter reads, set up powerful, high-performing smart alerts and edit information reporting for managing fleets of printers & MFP devices.

This cloud solution is flexible and accessible from any browser with security permissions. It's compatible with all printing device systems, while remaining fully independent of the OEMs.

KDFM Monitor Advanced ICE can be installed on multiple platforms: Windows, Mac, Linux, Raspberry PI3.

Start saving time & money - sign up for KDFM Monitor Advanced now with no minimum billing quantity and no time commitment!

- ▶ **Collection**
- ▶ **Assessment**
- ▶ **Proactive Maintenance**
- ▶ **Just-in-Time Supplies & Service**

KDFM Monitor Advanced solution helps office equipment dealers in the daily organization by:

- Easily and accurately collecting meter reads and integrating the data into ERP to generate customer invoices.
- Predicting toner and other supplies depletion date and planning maintenance ahead.
- Increasing revenue by offering supplies for "toner out" printers.

Support & Security

- Cloud solution with no hardware installation
- Fully automated updates and upgrades
- Experts available in your local language
- Software and interface secured using RSA 1024 Bit encryption

KDFM Monitor Advanced

Automatic Meter Reads Collection

Once installed at the customer site, KDFM Monitor Advanced will automatically list all the devices connected to the network with full information (IP, MAC address, serial number, brand, model, etc.). You get a notification every time a new device is connected on the network. You can select the devices you want to track. The data can then be exported into an accounting system for billing purposes or directly integrated into your ERP via API technology.

Just-in-Time Deliveries

You can set very powerful and reliable smart alerts, like low toner warnings, by setting the number of days prior to toner depletion, enabling you to plan your consumables deliveries and maintenance in advance. KDFM Monitor Advanced manages recurrent alerts and is one of the most trusted tools in the market.

New Sales Opportunities

With KDFM Monitor Advanced's overview of your customer's entire fleet, you can detect competitor's devices and edit tailor-made quotes – offering more competitive devices that are aligned to your customers' printing requirements, and building customer loyalty.

Should you require additional and customized training, our Expert team will be available for an on-site workshop to help you create advanced smart alerts and deploy devices connections (price on request).

So, are you ready to connect?
