# Quality Certificate

## Katun Performance™, Katun Access™, Katun® Business Color, Katun Select™ and Media Sciences® Toner

### Standardized Testing Methods

Since our inception in 1979, Katun has been committed to providing industry-leading OEM-alternative replacement supplies for imaging equipment. Our thorough testing protocols are key to that commitment.

### STMC Certified Testing

Many Katun products are tested in our STMC-certified laboratory in Minneapolis, Minnesota, incorporating practices consistent with ISO 17025.

The STMC certification program required Katun to demonstrate proficiency in three standard methods. Further, Katun also utilizes proprietary test methods to ensure that our products meet or exceed end-user expectations. Katun's testing has always and will continue to include both proprietary methods as well as evaluations based on, inspired by, or in line with industry standards.

### Katun incorporates testing methods similar to the practices listed below. This list includes the standards organization, standard number and description:

☐ ASTM (American Society for Testing and Materials) F1856-04 Standard Practice for Determining Toner Usage for Printers

☐ ASTM F2036-04 Standard Test Method for Evaluation of Large area Density and Background on Electrophotographic Printers

☐ ASTM F557-03e1 Standard Test Method for Particle Size Measurement of Dry Toners

☐ ASTM F875-94 (2003) Standard Test Method for Evaluation of Large Area Density and Background on Office Copiers

☐ ASTM F995-97 (2001) Standard Practice for Estimating Toner Usage in Copiers Utilizing Dry Two-Component Developer

☐ ASTM F1425-92 (2001) Standard Test Method for Determining the Tribocharge of Two-Component Materials

☐ ISO/IEC 19752 Method for the Determination of Toner Cartridge yield for Monochromatic Electrophotographic Devices that may contain Printer Components

☐ ISO/IEC 19798 Method for the Determination of Toner Cartridge yield for Color Electrophotographic Devices that may contain printer components
