KDFM Printanista

PRINTANISTA WORKFLOW: Add Value to your MPS offering

Printanista Workflow is a powerful user management software included with the KDFM Printanista Premier package. It provides a full assessment of print output (including scanning and copying activity with the Embedded feature**), which leads to a better understanding of usage patterns and work flows. With this analysis, dealers can recommend different solutions, including secure print release, to drive sustainable practices, reduce document output costs and optimize security.

Printanista Workflow can help both dealers and their customers to manage and optimize a users' print environment, in term of cost savings, security and business analysis.

KDFM software solutions are highly protected and constantly monitored to ensure the confidentiality, security and availability of the data collected by our customers, vital to their business and our own success.

Access to KDFM Printanista is controlled by permission-based user management and requires all sites to use HTTPS with a valid SSL security certificate. This guarantees the encryption of data transferred over the Internet.

**Embedded feature available for: HP, Xerox, Sharp, Kyocera, Konica-Minolta, Ricoh MFP devices
